

Outputs

Output Directories Structure

For each TRExFit object, a directory is created, with the same name as the Fit Name. Inside this directory, at every step, some outputs are created, following the structure described above:

Folder	Content
Plots/	data/MC plots, pre- and post-fit, for all the Signal, Control and Validation regions, including the summary plots
Pulls/	This is where pull plots and pull significance plots will be
Tables/	tables in txt and tex format
RooStats/	workspace(s) and the xmls
Fits/	output from fits
Limits/	outputs from the limit-setting code
Significance/	outputs from the significance code
Systematics/	plots for the syst variations
Toys/	plots and ROOT files with pseudoexperiments output
Histograms/	root file(s) with all the inputs
LHoodPlots/	likelihood scan with respect to the specified parameter
UnfoldingHistograms/	folded histograms produced during <code>u</code> step
